Color Fonts?

Lobster
Lobster

National Park Emoji from Noto Emoji by Jennifer Daniel

<https://github.com/googlefonts/noto-emoji/>

Bungee by DJR <https://djr.com/bungee>

Material Two Tone Icons <https://fonts.google.com/icons>

كوفى ريف

Reem-Kufi Arabic font by Khaled Hosny
<https://github.com/aliftype/reem-kufi>

COLRv1 Format

**COLRv1 glyphs are a
directed acyclic graph
of paint operations.**

Rendering a COLRv1 glyph means:

**Traverse the graph and execute the 2D
graphics operation in each node.**

PaintRotate

PaintGlyph

PaintRadialGradient

PaintColrGlyph

New Web Use Cases

Overcome image replacement

```
▼<span class="_3R6rC"> == $0
```

```

```

```
</span>
```

Variable Color Fonts

Elements become variable:

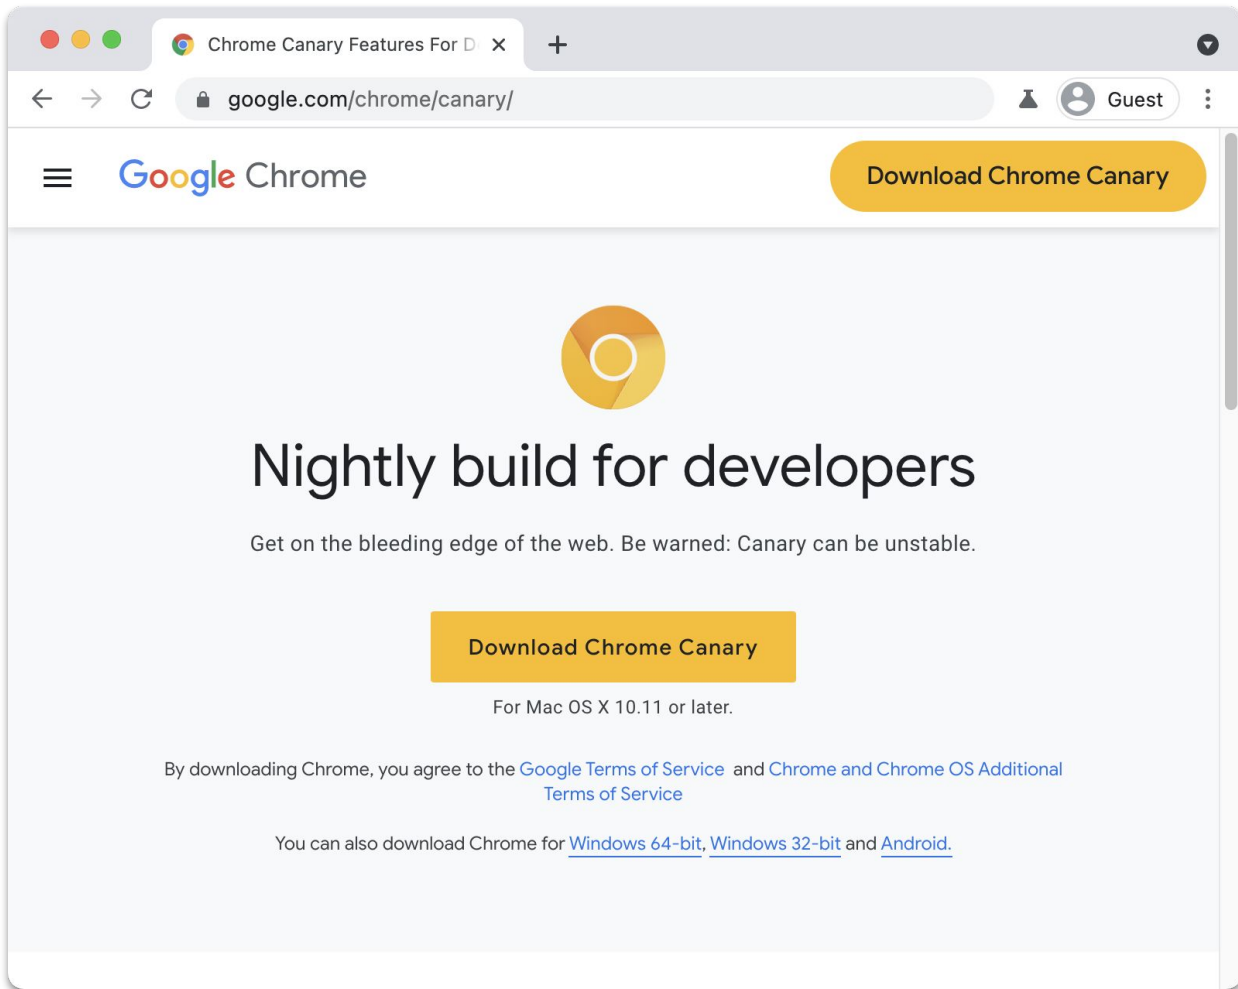

- Shapes (glyph outlines)
- Gradient placement, color stop offsets
- Color value alphas
- Transforms (e.g., rotation angles)

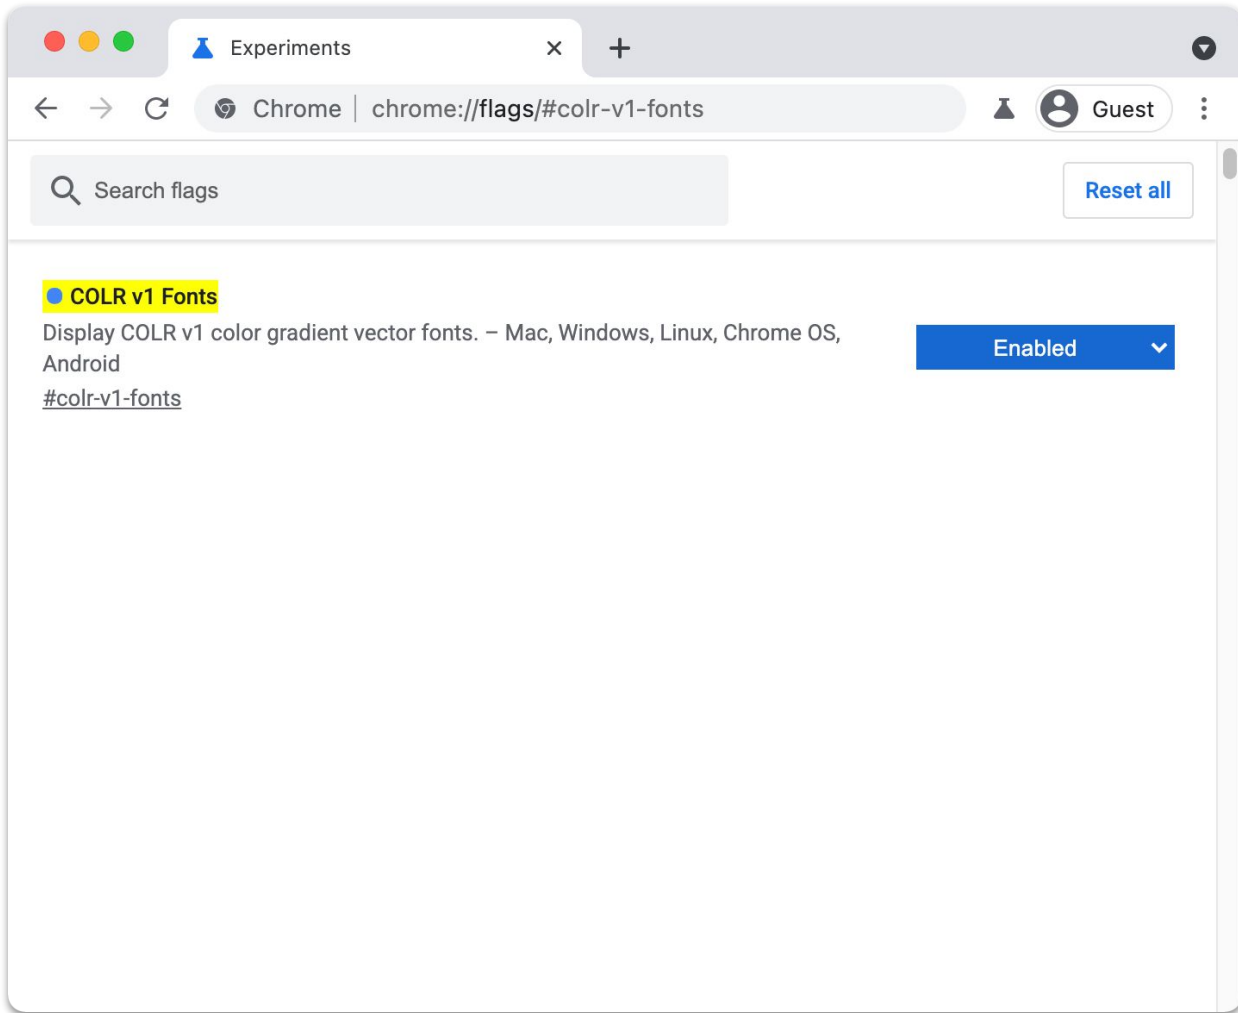

Variable

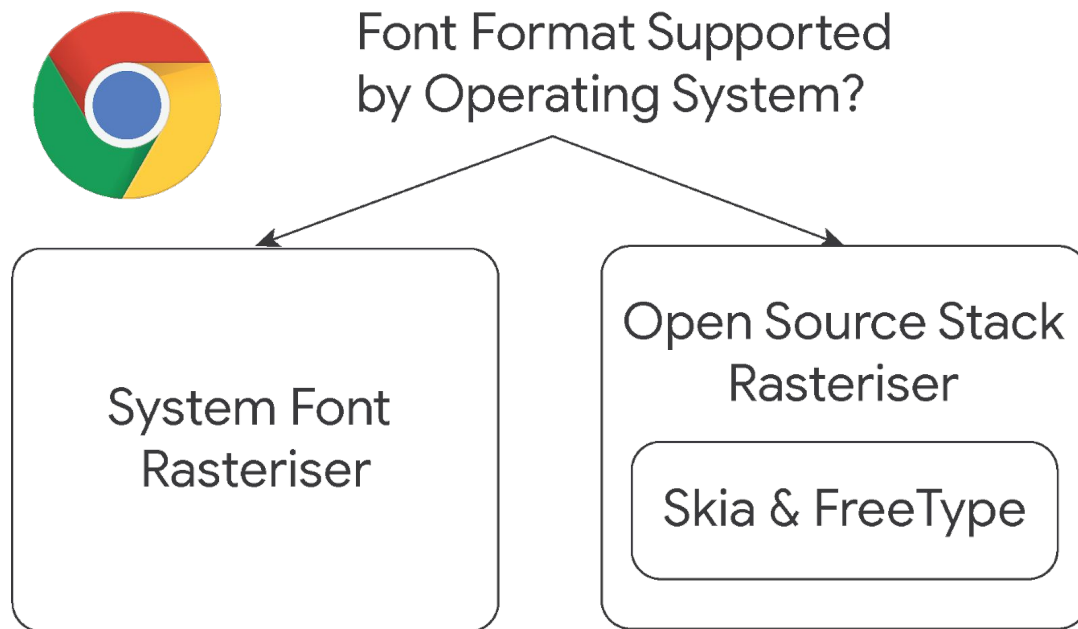

COLRv1 in Chrome & OSS

Hybrid Font Stack

Open-Source Foundations for COLRv1 in Chrome

Chrome's Font Stack

Loads and displays COLRv1 web fonts

Skia Graphics Library

Traverses COLRv1 glyph graph,
executes graphics operations

FreeType Library

Understands COLRv1
& CPAL tables

COLRv1 in OSS

- Black Foundry Python based renderer
 - <https://github.com/BlackFoundryCom/black-renderer>
- Issues for COLRv1 support filed for Swash
 - “Add support for COLRv1”
<https://github.com/dfrg/swash/issues/21>
 - “Implement a reference rasterizer for COLRv1 outlines”
<https://github.com/dfrg/swash/issues/22>

Noteworthy Positions - Microsoft

“COLR v1 also has the significant advantage of being much better integrated into other aspects of the OpenType format, notably variations.

For all these reasons, I believe the enhanced COLR table has the best prospects among the various OpenType colour formats [...].”

Peter Constable (MS) on [blink-dev](#)

Noteworthy Positions - Mozilla's Jonathan Kew

"I suspect that in the longer term, COLRV1 may (should?) eclipse OT-SVG as the preferred format for "rich" color fonts. [...]"

In summary, then, I think we should consider this as "worth prototyping".

Jonathan Kew (Mozilla) on [Mozilla's standards positions tracker](#)

Outlook

Feature Detection

CSS

```
@supports(font-technology(color-colrv1)) {  
  @font-face {  
    font-family: "my_colrv1_font";  
    src: url(my_colrv1_font.otf);  
    unicode-range: ...;  
  }  
}
```

Feature Detection

JavaScript

```
function isCOLRv1Supported() {  
    return CSS.supports(  
        "font-technology(color-colrv1)");  
}
```

CSS font-palette support

§ 9.1. Controlling Color Font Palettes: The 'font-palette' property

Name: ***'font-palette'***

Value: normal | light | dark | <palette-identifier>

<https://crbug.com/1170794>

COLRv2?

Capabilities?

- Bitmap embedding support
- Filter effects
 - blur, lighting, shadows...
- Bitmap patterns
- Mesh gradients

CPAL palette enhancements?

- Variation of color values
- Other representations than RGB — HSL, Lab, LCH...
- Wide color gamut

Recap

- COLRV1 is a highly space efficient color font format
- COLRV1 enables new use-cases on the web
- Implemented in Chrome's hybrid font stack
based on FreeType and Skia
- I2S LGTM'ed, flipping the flag real soon now

Thank you!

Twemoji, at rest

Twemoji, in flight

Noto Emoji, at rest

Noto Emoji, in flight

COLRv1

- Binary Format, fast to parse
- Highly space-efficient
- Integrates with variations and incremental transfer
- Lower implementation complexity, likely safer
- No XML dependency

OT-SVG

- XML documents embedded in OpenType file
- Large files
- XML parser dependency and overhead
- No support for variations
- Interoperability issues

Technical, Best Practices & Etiquette

**Pro Tip: Please check your [Network Connectivity Settings](#) & [browser compatibility](#) prior to your talk*

- Please review [Best Practices for Speakers](#)
- Preferable to use a hard line connection over wireless & headset
- Find a quiet location with a background that's not too distracting
- Have a light source in front of you to help bring the focus on you
- Put your devices in "Do Not Disturb" mode to silence notifications on your computer & other nearby devices
- Mute your mic when you are not speaking
- Look directly into the camera as much as possible to establish eye contact with your viewers
- [sign up for a Hopin Demo](#) or watch a [short orientation video for attendees](#)

Breakout Session Instructions

To present your slides live or pre-recorded talk

1. When it's time for you to start your session, click on your session you have been assigned in your calendar invite
 - Choose how you would like to capture captions for your presentation:
 - [Syncwords Integration](#)
 - [Accessibility: Tips on Using Captions and Translations](#)
 - [Creating Captions with Google Slides](#)
 - [Creating Captions with Google Meet and Zoom](#)
 - [Webcaptioner](#)
 - Click share audio and video
 - Once you are on screen, you are live to anyone viewing the session
2. As the moderator, you will be able to bring people onto the screen from the moderation panel in your bottom left corner.
3. Click the “Return” button to go back to the “Main Event page” when your session is complete

Live Captions on Google Chrome

Follow these steps to enable Google Chrome's live captioning tool if you want to see captions anytime audio is detected through your browser:

1. Copy and paste this link into Chrome: **chrome://settings/accessibility**
2. Toggle the “*Live Caption*” control on. When **Live Caption** is on, the toggle turns blue
3. Quit and relaunch Chrome.
 - a. The next time Google Chrome detects audio (whether you're watching a video, chatting on Google Meet or attending an event on Hopin), the **Live Caption** window will automatically appear.

Hopin Resources

**Pro Tip: Don't have many apps or tabs open while using hopin for best performance*
