OOP-D: Out-of-Process Display Compositor

Chrome GPU Brownbag
2018/03/14
kylechar@chromium.org

What is OOP-D?

Moving the display compositor from the browser UI thread to a dedicated compositor thread in the GPU process.

Why OOP-D?

- Enable Vulkan support
  - Vulkan compositing without writing a Vulkan command buffer.
- Enable salamander architecture
  - No renderer impl thread(s), do impl thread work in GPU process.
- Less display compositor GL overhead
  - No IPC and maybe no command buffer.
- More responsive UI
  - Display compositor not impacted by UI thread queuing delay.
  - UI thread runs fewer tasks which lowers queuing delay.
- Fewer browser process crashes

What changes with OOP-D?

1. **Where** the display compositor runs.
2. **How** the browser process controls the display compositor.
3. **How** and **where** the UI compositor submits CompositorFrames.
4. **Where** the renderer compositor submits CompositorFrames.
5. **How** renderer metadata reaches the browser.

# Compositing Message Flow (Current)
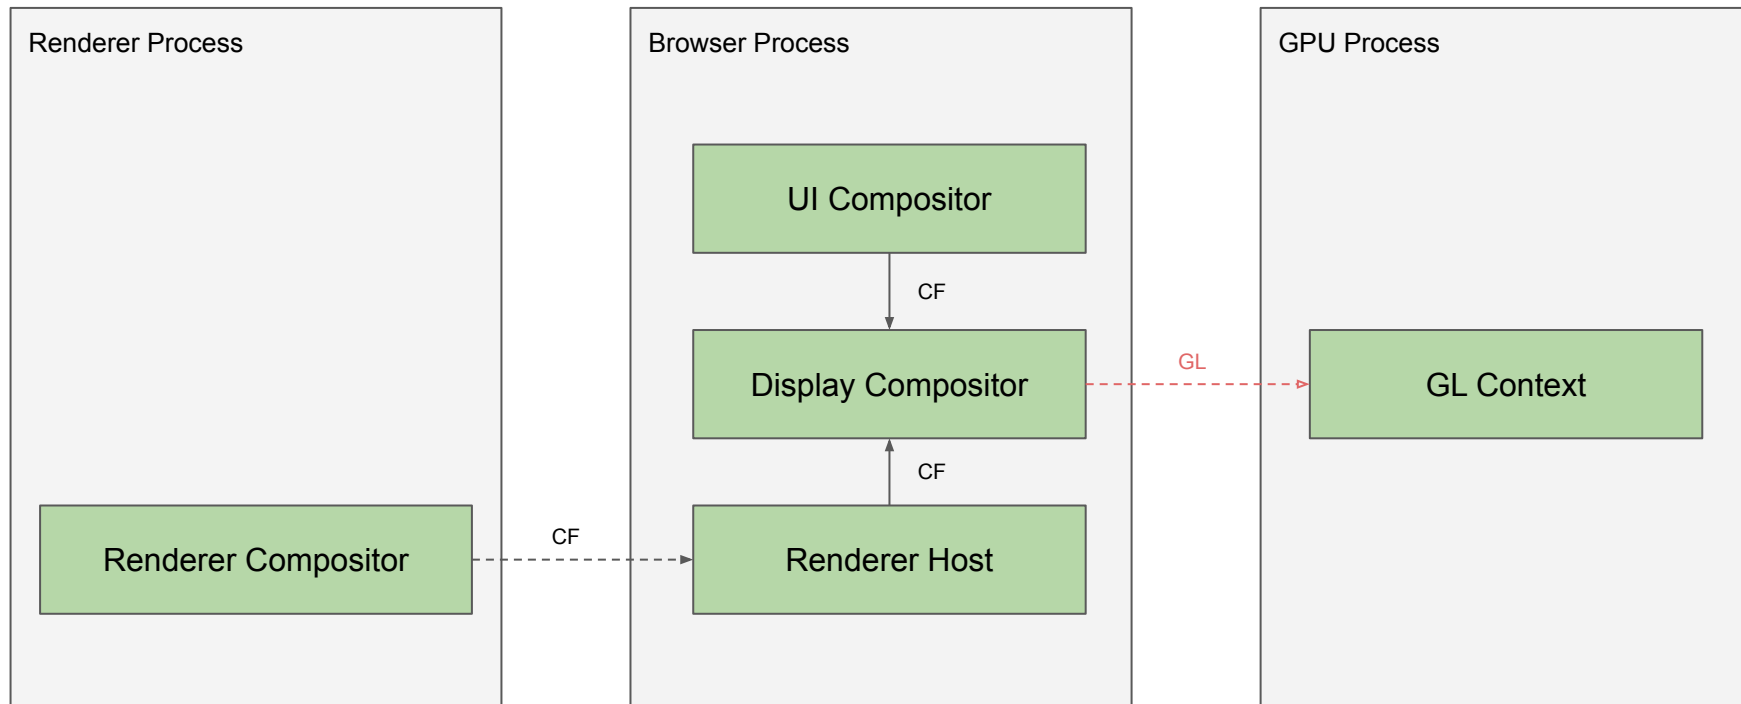

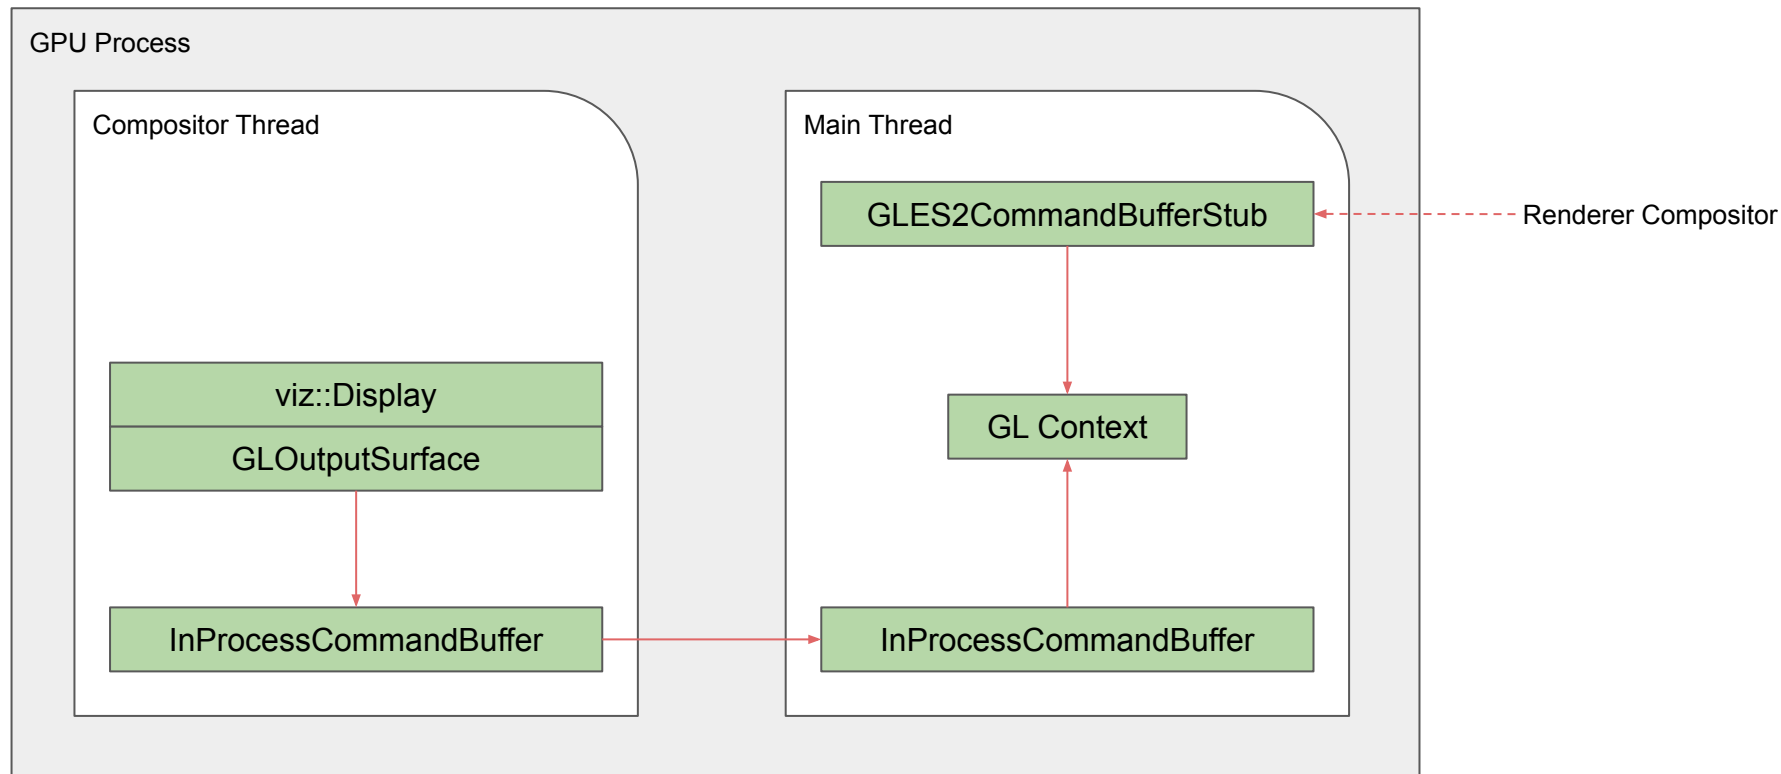

Compositing Message Flow (OOP-D)
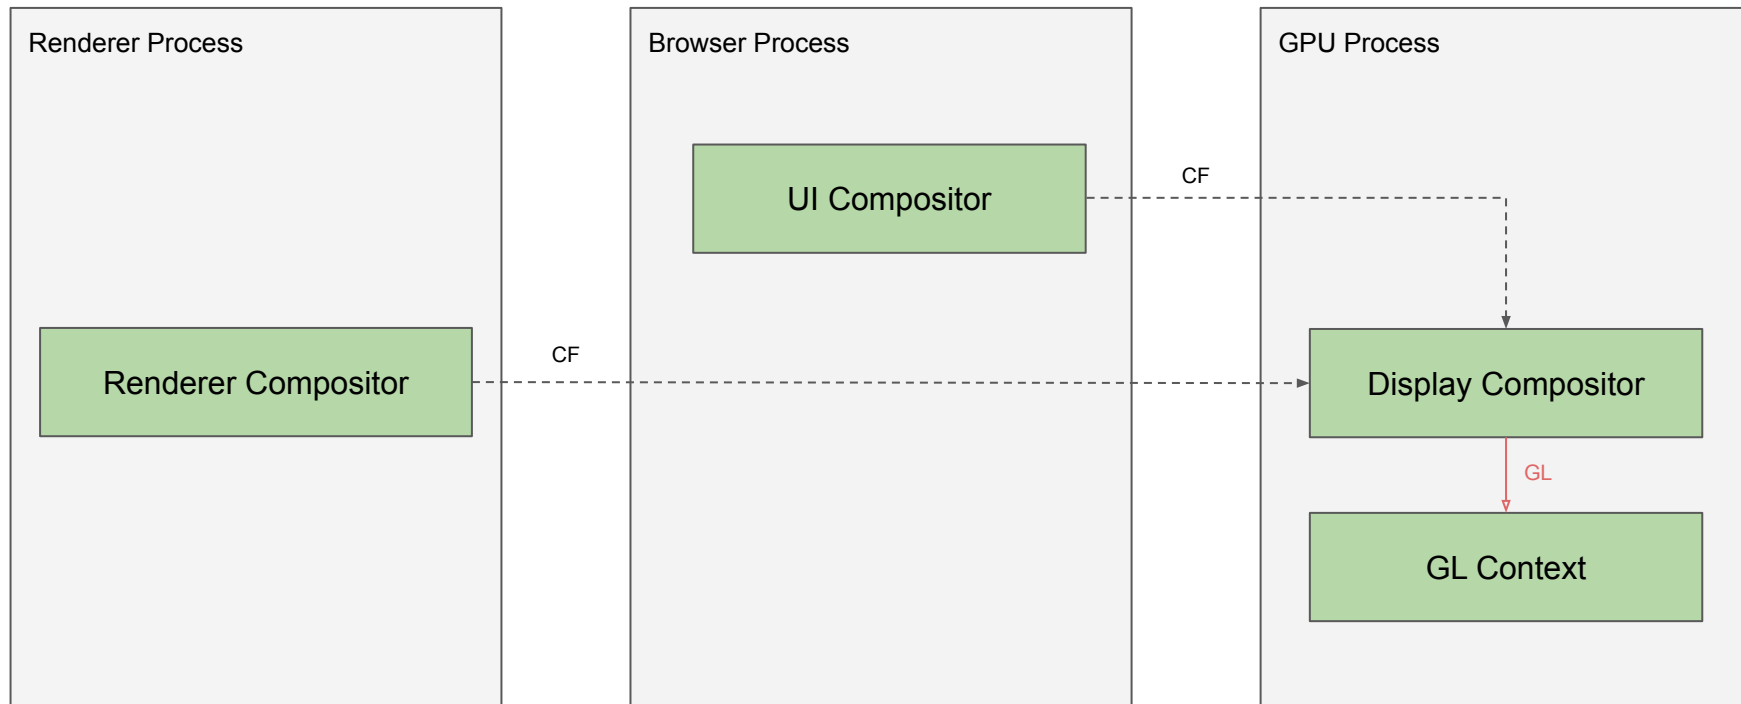

GPU Process Changes

1. Added VizCompositorThread for display compositor
   - FrameSinkManagerImpl (1) + viz::Display (n) + CompositorFrameSinkSupport (m)
2. Display compositor uses InProcessCommandBuffer
   - Sends GL commands from compositor to gpu main thread.
   - Existing code used for Android WebView and tests.
3. Software compositing runs on VizCompositorThread
   - SoftwareOutputSurface instead of GLOutputSurface

GL Command Flow (Current)

Browser Process

GPU Process

Main Thread

GLES2CommandBufferStub - - - - - - - - - Renderer Compositor

GL Context

viz::Display

GpuBrowserCompositorOutputSurface

CommandBufferProxyImpl - - - - - - - - - → GLES2CommandBufferStub
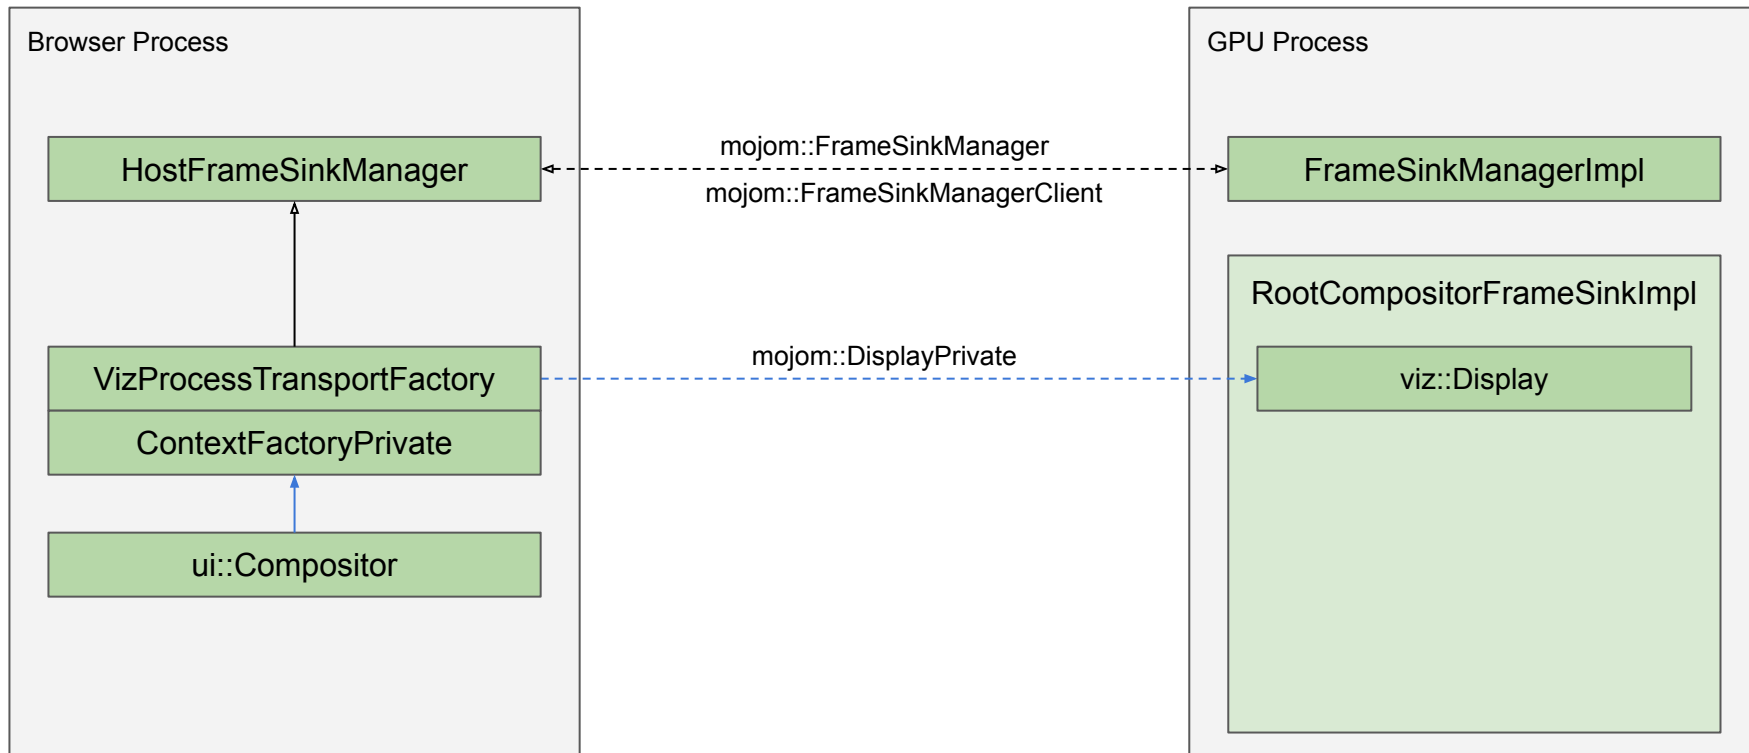

GL Command Flow (OOP-D)

Browser Process Changes

1. No more display compositor.
2. HostFrameSinkManager uses IPC.
    - Sends IPCs to FrameSinkManagerImpl in GPU process.
3. VizProcessTransportFactory controls display compositor.
    - Replaced by GpuProcessTransportFactory.
4. CompositorFrame submission over IPC.

Display Compositor Control (Current)

Browser Process

HostFrameSinkManager ↔ FrameSinkManagerImpl

GpuProcessTransportFactory → viz::Display

ContextFactoryPrivate

ui::Compositor

Display Compositor Control (OOP-D)

Browser Frame Submission (Current)

Browser Process

ui::Compositor

DirectLayerTreeFrameSink ← CompositorFrameSinkSupport

Browser Frame Submission (Current)

Browser Process

ui::Compositor

ClientLayerTreeFrameSink

GPU Process

RootCompositorFrameSinkImpl

CompositorFrameSinkSupport

mojom::CompositorFrameSink

mojom::CompositorFrameSinkClient

Browser-GPU IPC (OOP-D)

Browser Process

- HostFrameSinkManager
- VizProcessTransportFactory
- ContextFactoryPrivate
- ui::Compositor
- ClientLayerTreeFrameSink

GPU Process

- FrameSinkManagerImpl
- RootCompositorFrameSinkImpl
  - viz::Display
- CompositorFrameSinkSupport

mojom::FrameSinkManager
mojom::FrameSinkManagerClient

mojom::DisplayPrivate

mojom::CompositorFrameSink
mojom::CompositorFrameSinkClient

Renderer Process Changes

1. Submits CompositorFrames to GPU.
   - Renderer is unaware anything changed.
2. Browser can't inspect renderer CompositorFrames. Need to send renderer metadata to browser process directly.
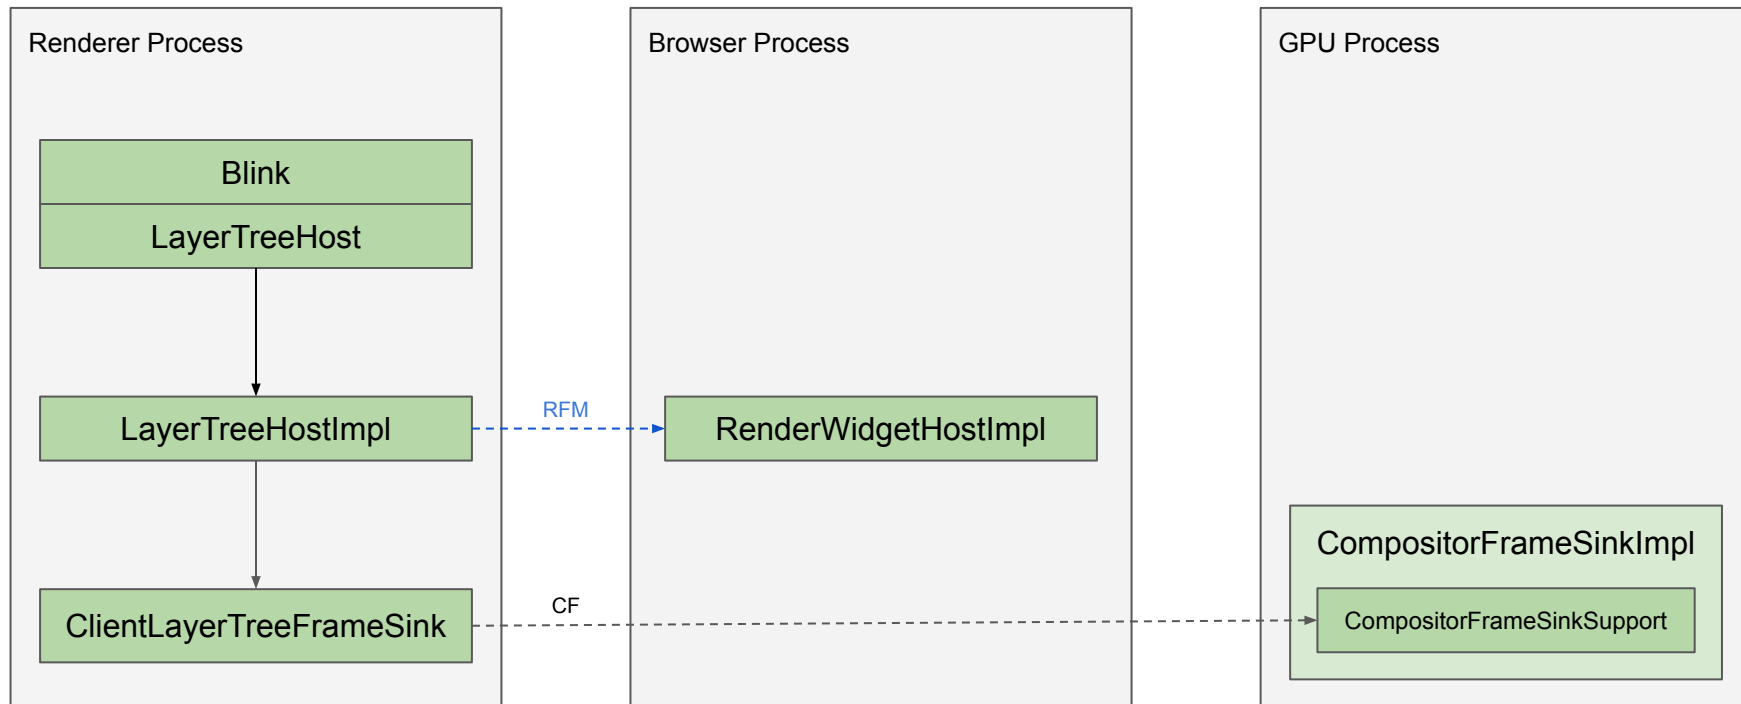

Renderer Frame Submission (Current)

Renderer CompositorFrame Submission (OOP-D)

Renderer CompositorFrame Submission (OOP-D)

Renderer Process

- Blink
- LayerTreeHost
- LayerTreeHostImpl
- ClientLayerTreeFrameSink

Browser Process

- RenderWidgetHostImpl

GPU Process

- CompositorFrameSinkImpl
  - CompositorFrameSinkSupport

RFM

CF

OOP-D Status

- Works (mostly) on Windows, Linux and Mac
- Rough edges:
  - Software compositing for video, pepper, etc.
  - DevTools renderer data and screen capture
  - OOPIF hit testing
  - InProcessCommandBuffer
  - Testing
- Guarded by VizDisplayCompositor feature
  - Command line `--enable-features=VizDisplayCompositor`
  - chrome://flags/#enable-viz-display-compositor

OOP-D Tracking

- Hoping to start finch trial in M67
  - Windows and Linux on canary/dev channels
- OOP-D Finch Trial
